1 Purpose and scope

This document describes the improvements and changes of ASAP2Toolkit V13.1 compared to previous

2 What's new in Version V13.1.R0?

Improvements and changes of V13.1.R0 compared to previous.

2.1 Features

ExpA2

- Export of addresses with default value (e.g. without ImpELF) is always set to 0x0.

ImpA2

- Support of ASAM MCD-2 MC V1.7 feature: Optional numbers for MATRIX_DIM.

2.2 Improvements / Correction of Bugs

ExpA2

- ClassConcept - Export considers A2Lversion < 1.4. that do not support SYMBOL_LINK entries.

ImpA2

- Importing a DO multiple times during A2L Import (with Option "OverwriteExisting") does not collect unknown A2L attributes entries multiple times anymore. Existing entries are overwritten.

ImpELF

- For detected bitfields from an ELF file where the corresponding entity in DDS is incomplete the bitfield width was always assumed to be '1'. Now, the correct value is taken from the ELF files bitSize attribute.

3 No longer supported filters/components
